Lab 01: Creating and updating your NMP GitHub Repo

For this first lab assignment, you'll be pushing your newly-created *map672* repository to your GitHub account. To receive full credit for this assignment, the following **requirements** must be met.

1. Create your GitHub account and *map672* repository (1 pt)
2. Provide your instructor with your GitHub username by email through Canvas (1 pt)
3. Add your instructor as a collaborator to your *map672* repository through GitHub (1 pt)
4. Read the Floating Sheep Manifesto (http://manifesto.floatingsheep.org/)
5. Push updated files to your repository, including:
   - an updated *README.md* file (see specifications below) (3 pts)
   - an updated *index.html* file (see specifications below) (4 pts)

Specifications of the deliverables

README.md file

Update the *README.md* file created and modified through lesson-01 to include a sub-heading titled "My Learning Objectives" (use two ## to make a subheading) followed by 4 – 6 bullet points of specific skills and learning outcomes you home to achieve within this course.

index.html file

Update the *index.html* file to include a sub-heading, written between two h2 tags (<h2></h2>), titled: "Reaction to the Floating Sheep Manifesto". Follow this sub-heading with a paragraph or two (minimum 250 words) that describes your

reaction to the writing. Feel free to be critical, but consider addressing:

- where you position yourself among the coder/cartographer/critique and why?
- what priorities will you set as you move forward in your mapping career?
- which of the six manifesto points do you find most provocative or problematic and why?

Submission

Provide a link to your repository within the Canvas LMS for lab-01 assignment by the due date.
